GALAXSIM UNLOCK

About

GalaxSim Unlock is the first app able to unlock your Samsung Galaxy device without automatic relock after reboot on recent roms (SGS2, SGS3, Note2...).

Definition

1. *What is sim unlock (or unsimlock) ?*

Many carriers sell devices that are locked on their own network. These devices can't be used with another carrier's sim card. Unsimlocking will remove this restriction so that you can freely use your device. Please note that a device that's been locked by a carrier because it's been reported lost/stolen won't be unlocked with this app (this kind of unlock is illegal).

2. *How can I know it's locked or not ?*

You can easily see if your device is simlocked by using another carrier's sim card. If it's simlocked, it will request a "sim (or network) unlock code" at boot. If no code is requested, then you can assume that your device is not simlocked.

3. *Why would I need to do that ?*

Here are a few reasons :

- Your contract has ended, you want to change carrier, but your current carrier refuses to give you an unlock code
- You bought it from second hand and didn't know it was locked
- You want to go abroad and use a local prepaid sim
